LEAN SOLUTIONS CERTIFICATE

Supported by:
citrep EXPANDED

Process innovation has become vital in today's tough economic scenario to drive improvements toward greater competitiveness. Technological advances have created countless new opportunities in virtually every sector to support the innovation of faster and more robust processes for businesses and their value chains. At the same time powerful methodologies like Lean Management are becoming much more predominant in industry and are being used to leverage the employees who do the work so as to innovate the processes.

The strength of Lean Management consists of proven practical methods and tools which can be used to see the big picture from end to end of the process to identify the main problems, issues and wastes it faces. Lean is effectively used to make improvements to business processes. Lean provides the tools and techniques about how to change the process and to make it better, that is, to develop the solutions to the problems, issues and wastes in the process.

This Lean Solutions Certificate course will provide a practical workshop with project work to develop key personnel in organizations to lead or be members of project teams to drive process innovation for the long term.

Making use of a detailed case study participants learn how to develop solutions using lean principles and tools in conjunction with state-of-art technology to create total solutions with consideration of the following elements: People, Technology, Processes, Partners and Suppliers, Information Flow and Material Flow.

Benefits of the Program

This Lean Solutions Certificate course will provide a practical workshop with project work to develop key personnel in organizations to lead or be members of project teams to drive process innovation for the long term. It consists of both classroom training and extensive hands-on project work related with implementation to ensure maximum learning effectiveness. Strong emphasis is placed on the practical work since most learning takes place when participants perform the real-world hands-on project related work. This course emphasizes the use of lean in conjunction with state-of-art technology to build effective service systems.

Organizations will gain because the deployment of Lean tools jointly with the use of new technologies provides a springboard for businesses to leap frog and advance ahead of their competitors. The merging of the deployment of Lean tools with use of new or relevant technologies is what is called 'Lean Solutions'.

Lean Solutions Certificate comprises of the following modules: Lean Solutions (Part 1), Lean Solutions (Part 2), Project work, Project Review Session, Elective Module: Six Sigma
